GENERAL

animals starting with letter b

Published: September 3, 2026 | Index ID: #-

Introduction

When we think of the animal kingdom, our minds often drift to the most iconic creatures that share our planet. From the graceful **eagle** to the mighty **elephant**, the diversity of life is astonishing. But what if we zoom in on a specific alphabetical slice of that vast tapestry? In this article, we explore the fascinating world of **animals starting with the letter "B"**. Whether you're a biology student, a curious parent, or simply a lover of nature, this guide will take you on a journey through a wide range of species—mammals, birds, reptiles, amphibians, fish, insects, and more—all beginning with the letter B.

Each section will highlight a selection of animals, describe their unique characteristics, habitats, and interesting facts, and showcase the incredible diversity that exists within this single alphabetical group. By the end, you'll have a deeper appreciation for the hidden wonders that start with "B" and the ecological roles they play around the world.

Mammals That Begin with "B"

1. Bison

- Scientific name: Bison bison (American bison) and Bison bonasus (European bison)
- Habitat: Grasslands, prairies, and open forests across North America and parts of Europe.
- Key facts: The American bison is the largest land mammal in North America, known for its massive hump and shaggy brown coat. European bison, also called wisent, are the largest mammals in Europe and were once extinct in the wild until reintroduction efforts.

2. Blue Whale

- Scientific name: Balaenoptera musculus
- Habitat: Oceans worldwide, especially in cold waters.
- Key facts: The blue whale is the largest animal that has ever lived. An adult can reach 100 feet in length and weigh over 200 tons. They feed primarily on tiny shrimp-like organisms called krill.

3. Bat

- Scientific name: Order Chiroptera (various species)
- Habitat: Found in almost every terrestrial environment except extreme deserts and polar regions.
- Key facts: Bats are the only mammals capable of sustained flight. They use echolocation to navigate and hunt insects, making them vital for pest control.

4. Binturong

- Scientific name: Arctictis binturong
- Habitat: Tropical forests of Southeast Asia.
- Key facts: Often called the "bearcat," the binturong is a semi-arboreal omnivore with a distinctive prehensile tail and a scent that smells like popcorn.

5. Bonobo

- Scientific name: Pan paniscus
- Habitat: Central African rainforests.

- Key facts: Bonobos are close relatives of chimpanzees, known for their peaceful social behavior and matriarchal societies.

6. Baboons

- Scientific name: Genus Papio (e.g., Papio anubis, Papio hamadryas)
- Habitat: Savannas, grasslands, and woodlands across Africa.
- Key facts: Baboons are highly social primates with complex hierarchies. They are adaptable, feeding on a varied diet of plants, insects, and small vertebrates.

7. Bats (Bats of the Family Phyllostomidae)

- Scientific name: Various species, e.g., Glossophaga soricina (lesser long-nosed bat)
- Habitat: Central and South America.
- Key facts: These fruit bats are critical pollinators for many tropical plants, including cacti and agave.

Birds That Begin with “B”

1. Bald Eagle

- Scientific name: Haliaeetus leucocephalus
- Habitat: North America, especially near large bodies of water.
- Key facts: The national bird of the United States, the bald eagle is a powerful predator, known for its keen eyesight and impressive wingspan.

2. Blue Jay

- Scientific name: Cyanocitta cristata
- Habitat: Eastern United States, especially in deciduous forests.
- Key facts: Blue Jays are known for their bright blue plumage and noisy chatter. They also store nuts and seeds in caches for later use.

3. Barn Owl

- Scientific name: Tyto alba
- Habitat: Grasslands, farmlands, and wetlands across the globe.
- Key facts: Barn owls have exceptional hearing, allowing them to locate prey in the dark. Their heart-shaped face is a distinctive feature.

4. Blackbird

- Scientific name: Turdus merula (Common blackbird)
- Habitat: Europe, North Africa, and western Asia.
- Key facts: Blackbirds are known for their melodic songs and are a common sight in gardens and parks.

5. Bonaparte’s Gull

- Scientific name: Chroicocephalus philadelphia
- Habitat: Coastal areas of North America.
- Key facts: A small gull species that feeds on fish and crustaceans along shorelines.

6. Bowerbird

- Scientific name: Family Ptilonorhynchidae (e.g., Ptilonorhynchus violaceus)
- Habitat: Australian rainforests and woodlands.
- Key facts: Male bowerbirds build elaborate structures called bowers and decorate them with colorful objects to attract mates.

Reptiles That Begin with “B”

1. Boa Constrictor

- Scientific name: Boa constrictor
- Habitat: Central and South America, especially in tropical forests.
- Key facts: Boa constrictors are non-venomous snakes that kill prey by constriction. They can grow over 13 feet in length.

2. Box Turtle

- Scientific name: Terrapene spp.
- Habitat: North America, from Canada to Mexico.
- Key facts: Box turtles have a hinged plastron that allows them to close their shell tightly for protection.

3. Blue Iguana

- Scientific name: Cyclura lewisi (Cuban blue iguana)
- Habitat: Cuba.
- Key facts: These iguanas are known for their vibrant blue coloration and are endangered due to habitat loss.

4. Burmese Python

- Scientific name: Python bivittatus
- Habitat: Southeast Asia, especially in the Mekong River basin.
- Key facts: The Burmese python is one of the largest snake species in the world, capable of swallowing prey larger than its head.

5. Brontosaurus (Historical)

- Scientific name: Brontosaurus excelsus (though now often classified as Apatosaurus)
- Habitat: Late Jurassic period, North America.
- Key facts: Though not a living reptile, Brontosaurus is a classic example of a large herbivorous dinosaur that once roamed the earth.

Amphibians That Begin with “B”

1. Bullfrog

- Scientific name: Lithobates catesbeianus
- Habitat: North America, especially in wetlands and ponds.
- Key facts: Bullfrogs are large, aggressive amphibians known for their deep croak and voracious appetite.

2. Blue Poison Dart Frog

- Scientific name: Dendrobates tinctorius (Blue variant)
- Habitat: Amazon rainforest.
- Key facts: These frogs produce potent toxins used by indigenous people for hunting darts.

3. Banded Newt

- Scientific name: Notophthalmus viridescens
- Habitat: Eastern United States, especially in ponds and marshes.
- Key facts: Banded newts have a distinctive greenish body with a black band along the back and are known for their regenerative abilities.

Fish That Begin with “B”

1. Barracuda

- Scientific name: Sphyraena spp.
- Habitat: Tropical and subtropical oceans worldwide.
- Key facts: Barracudas are sleek, predatory fish known for their sharp teeth and speed.

2. Blue Tang

- Scientific name: Paracanthurus hepatus
- Habitat: Coral reefs in the Indo-Pacific region.
- Key facts: Famous from the movie Finding Nemo, blue tangs are prized in the aquarium trade for their bright coloration.

3. Betta Fish (Siamese Fighting Fish)

- Scientific name: Betta splendens
- Habitat: Freshwater streams and ponds in Southeast Asia.
- Key facts: Bettas are known for their vibrant colors and aggressive male behavior during breeding.

4. Bream

- Scientific name: Various species in the family Cyprinidae (e.g., Abramis brama)
- Habitat: Freshwater rivers and lakes across Europe and Asia.
- Key facts: Bream are popular game fish and are also used in culinary dishes.
