# how to hide apps on ipad

Published: September 3, 2026 | Index ID: #-

## Introduction

Every iPad user eventually asks the same question: **how to hide apps on iPad**without deleting them. Whether you want to keep a photo editing app out of sight while traveling, protect a children's device from adult content, or simply declutter your home screen, Apple provides several built in options to conceal applications. This guide will walk you through the most effective methods, step by step instructions, and helpful tips to keep your device organized and secure.

## Why Hide Apps on iPad?

Hiding apps can serve multiple purposes:

- Privacy and Security – Prevent accidental taps or keep sensitive information hidden.
- Parental Controls – Restrict access to certain apps for children.
- Device Cleanliness – Reduce visual clutter and make navigation faster.
- Work Life Balance – Hide distracting social media or gaming apps while at work.
- Battery Management – Keep background running apps invisible and monitor usage.

Understanding the motivation behind hiding apps helps you choose the right method and maintain a balanced digital lifestyle.

## Methods to Hide Apps on iPad

### Using Screen Time Restrictions (iOS 12 and Later)

Screen Time is Apple's native feature for managing usage. It allows you to set app limits, downtime, and content restrictions. By disabling an app entirely, you can effectively hide it from the home screen.

### Using the App Library and Home Screen Organization

With iOS 14 and newer, the App Library automatically groups apps. You can move apps to hidden folders or use the "Remove" option to keep them out of the main grid while still accessible via search.

### Using Guided Access

Guided Access locks the iPad into a single app. While it doesn't hide the app itself, it prevents users from leaving the app and accessing others, providing a form of concealment for sensitive use cases.

### Using Third Party App Hide Tools

Apple's sandboxed environment limits third party solutions. However, some apps claim to hide others by using a custom launcher or providing a "privacy mode." Use caution, as these may compromise device security.

### Using the Folder Trick

By creating a folder and placing the target app inside, you can hide its icon from the home screen. This method is simple but not foolproof, as the app remains visible in the folder.

### Using Offloading Apps

Offloading removes the app's executable but keeps its data. The app appears in the App Library, not the home screen, effectively hiding it while preserving data.

### Using Custom Homescreen Layouts (iOS 16+)

iOS 16 introduced the ability to create multiple home screen layouts. You can move apps to a separate layout that you rarely use, thereby hiding them from everyday view.

## Step by Step Guides

### Hide an App Using Screen Time

1. Open Settings and tap Screen Time.
2. If you haven't enabled it, toggle Turn On Screen Time and set a passcode.
3. Tap App Limits, then Add Limit.
4. Choose the app category or specific app you want to hide.
5. Set the time limit to 0 minutes. This disables the app.
6. Confirm by tapping Add. The app will now be grayed out on your home screen.
7. To restore, repeat the steps and set a time limit of your choice.

### Hide an App via the App Library

1. Swipe left until you reach the App Library.
2. Locate the app you wish to hide.
3. Long press the app icon and select Remove App.
4. Choose Remove from Home Screen. The app remains in the App Library.
5. Use the search bar to find and reinstall the app when needed.

### Hide an App Using Guided Access

1. Navigate to Settings > Accessibility > Guided Access.
2. Enable Guided Access and set a passcode.
3. Open the app you want to lock.
4. Triple click the Home button (or side button on newer models).
5. Tap Options to disable touch or hardware controls.
6. Tap Start to lock the app. Users can't exit without the passcode.

## Tips for Managing Hidden Apps

- Keep a Backup List – Maintain a spreadsheet of hidden apps for easy reference.
- Use Descriptive Folder Names – When moving apps to folders, name them "Hidden" or "Work" to avoid confusion.
- Regularly Review – Periodically check hidden apps to ensure none are accidentally left behind.
- Leverage Family Sharing – Set restrictions for child devices without affecting the parent's home screen.
- Stay Updated – New iOS releases often add or refine hiding options; keep your device current.

## Common Issues & Troubleshooting

**App Remains Visible After Hiding** – Double check that the correct method was applied. For example, removing from the home screen via the App Library still keeps the app accessible via search.

**Screen Time Passcode Forgotten** – Reset it by going to Settings > Screen Time > Change Screen Time Passcode, then follow the prompts.

**Hidden App Reappears After iOS Update** – Some updates reset restrictions; reapply the hide settings after upgrading.

**Third Party Hide Apps Not Working** – Verify compatibility with the latest iOS version and check for any required permissions.

## Alternatives & Workarounds

While Apple's native options cover most needs, a few creative workarounds can help:

- Use a Custom Wallpaper – Place an app icon over a matching wallpaper to make it less noticeable.
- Create a "Hidden" Folder – Add a single, inconspicuous icon to the folder's top row.
- Leverage iPadOS 16 Layouts – Move apps to a seldom used layout and switch between layouts with a simple tap.
- Employ Parental Control Apps – Some third party solutions allow deeper app management, though they may require a subscription.

## Conclusion

Hiding apps on an iPad is a straightforward process once you know which tool suits your needs. From Screen Time restrictions to the App Library, iOS offers a range of built in features that let you keep your device organized, secure, and tailored to your lifestyle. Whether you're protecting a child's screen, decluttering for productivity, or simply keeping a personal app out of sight, the methods outlined above provide reliable, user friendly solutions. Remember to keep your iPad updated, review your hidden apps periodically, and choose the approach that best aligns with your privacy and organization goals. Happy hiding!
